BATA PRO-MIX Coarse Mix Range

Our **Pro-Mix** coarse feeds are specially designed to be highly palatable and digestible making them an ideal choice for young, pedigree and show livestock. With high levels of extremely palatable materials such as flaked peas, maize and beans and cooked flaked barley these diets promote intakes to maximise daily liveweight gains.

FEEDING CALVES

Maintaining good health in calves is crucial for the future of a herd. Poor health in young animals can have an impact on production and productivity as the animal matures.

Feeding a good quality starter feed from the first few days of age can help the calf thrive which boosts calf health and kick- starts the efficient development of the rumen.

Each coarse mix contains excellent sources of high-quality fibre, which are effective in enhancing rumen development, and cereals to provide starch and energy to aid papillae development in the rumen. Essential vitamins and trace minerals have been carefully selected help boost the immune system and support healthy bone and frame growth.

PRO-MIX CALF STARTER

- **For feeding to calves until 12 weeks of age.**
- **An extremely palatable, competitively priced 18% protein calf coarse mix.**
- **Designed to rapid boost rumen development.**
- **Contains good levels of cooked flaked materials for improved digestibility and feed conversion, resulting in excellent growth rates.**

All of these feeds are available at your local BATA Country Store in 25kg bags

They can also be ordered in 500KG totes from your local BATA Sales Representative.

FEEDING YOUR FLOCK

As lambing time approaches, we should turn our attention to the ewe to maximise the performance and profitability of the flock. Feeding a good quality ewe feed allows the ewe to maintain a good condition score which is vital at the point of lambing to maintain the health of her lambs.

Well-fed ewes are also able to produce excellent levels of good quality colostrum which boosts the immune response of the lamb, and in some cases, reduces reliance on oral antibiotics at lambing.

PRO-MIX SUPREME EWE

- **An extremely palatable 18% protein diet for specifically formulated for breeding ewes.**
- **Designed to add condition and provide energy required for late pregnancy and early lactation.**
- **Contains a rumen protected fat proven to improve milk quality and lamb performance.**
- **Features high levels of extremely palatable materials.**
- **Contains vitamin E**

PRO-MIX SHOW LAMB & RAM

- **A highly palatable lamb starter feed.**
- **Mixed with extremely palatable ingredients, carefully balanced to add condition and sheen.**
- **Contains Ammonium Chloride to prevent Urinary Calculi.**

This diet can also be fed to rams to maintain condition during the tupping season.

When feeding our ruminant feeds please ensure that clean, fresh water and a good quality roughage should be provided at all times.
